KARTHIK MOHAN J

Fullstack Developer

Thiruvananthapuram Keralam•+91 6235473502• karthikmohanj@gmail.com

Karthik Mohan J Karthimj-1954

SUMMARY

Engineering student with foundational skills in Python programming, web technologies, and data analysis. Hands-on experience in machine learning–based anomaly detection, full stack web development, and embedded systems through academic and training projects. Interested in applying technical knowledge to real-world software and data-driven applications.

TECHNICAL SKILLS

- Programming Languages: Python
- Web Technologies: HTML, Bootstrap, Django (basic),React.js,Firebase,TailwindCSS,React Leaflet
- Data Analysis: Data preprocessing, basic analysis
- Machine Learning: Supervised,Gradient boosting,Random Forest,Neural Network (project-based)
- Documentation Tools: Microsoft Word,Microsoft PowerPoint
- Other Skills: Data entry, computer operations

EDUCATION

Bachelor of Technology – Electrical and Computer Engineering
Mar Baselios College of Engineering and Technology, KTU
Thiruvananthapuram, Kerala
CGPA: 6.32
2022 – 2026

Frontend Developer Intern & Team Lead — Hexvault

2026 – Present

- Developed responsive apps using React.js, TypeScript & Tailwind CSS.
- Contributed to Table Manager, a QR-based restaurant platform.
- Built UI components, workflows, state management & API integrations.
- Led frontend tasks, code reviews & Git/GitHub workflows.

Frontend Development Intern — Unified Mentor

June 2026 – August 2026

- Developed responsive web interfaces and reusable frontend components.
- Worked on real-time projects using modern frontend technologies.
- Used Git/GitHub for version control, collaboration, debugging, and project maintenance.

PROJECTS

INDUSTRIAL IOT WITH AN ML BASED SOLUTION FOR CNC AND METAL MANUFACTURING MACHINES (FINAL YEAR PROJECT)

- Developed a machine learning–based anomaly detection system for CNC machines using 94,476 industrial sensor records.
- Implemented and evaluated Random Forest, Neural Network, and Gradient Boosting models.
- Achieved high detection accuracy to enable early fault detection and predictive maintenance.

KASASYNC – REAL-TIME PROPERTY MANAGEMENT SYSTEM (MAJOR PROJECT)

- Developed a property management platform for managing properties, bookings, tenants, and maintenance requests using role-based access.
- Implemented responsive user interfaces and real-time workflows to streamline property and booking management.

SMART RGB-BASED TEMPERATURE MONITORING SYSTEM (MINI PROJECT)

- Designed an Arduino-based temperature monitoring system using DHT11 sensor.
- Implemented RGB LED and buzzer alerts for normal, caution, and critical temperature levels.
- Displayed real-time temperature data on LCD for continuous monitoring.

KAFITHUB – GYM & TRAINER MANAGEMENT PLATFORM (FULL STACK PROJECT)

- Built a gym management platform using Next.js, MongoDB, JWT Authentication, Tailwind CSS, and Shadcn UI.
- Implemented trainer/client registration, trainer search, session booking, reviews, and role-based dashboards.
- Added city-based trainer pricing, image upload, admin approval, and responsive UI.
- Developed a secure, database-driven application with a scalable architecture for future payment integration.

SPORTS FINDER HUB (MAJOR PROJECT)

- Developed Sports Finder Hub, a full-stack web application using React.js, Firebase, Tailwind CSS, and React Leaflet to help users discover nearby sports partners, create play requests, and join sports communities.
- Implemented features including secure authentication, profile management, location-based matching, admin dashboard, match history, and real-time data handling, and deployed the application using Firebase Hosting.
